

TLC Tactical Light Cases

Protection, portation and presentation are the criteria by which tactical cases are judged. The ASP TLC cases excel in each of the three categories. These are the most advanced light carriers for the professional who must employ a high performance light under stress.

TLC cases are available for the Garda, Tungsten, Pro, Triad[®] and Raptor categories of illumination tools. The TLC rotates to 12 distinct positions. Cases carry lights lens down. The position protects the light and speeds presentation.

A tactical light is worn in the TLC on the Reaction Side. It is drawn in a smooth, natural grip with the thumb on the rear switch. Rapidly presented, the light may be instantly activated.

The Tactical Light Case secures lights with two opposing internal retention orbs. The TLC will snap on any military, duty or dress belt. It is MOLLE compatible. The TLC attachment clip is robust and secure. It is easily repositioned or removed.

The ASP TLC Tactical Light Cases. Protection, portation, presentation. Another street quality design from the company that set the standard.
